SECTION 1. IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1 Product Identifier

Material Name : AVGAS 100LL (<0.1% benzene)

1.2 Relevant identified uses of the substance or mixture and uses advised against

Product Use : Low lead content aviation gasoline fuel for piston engined aircraft Please refer to Ch16 and/or the annexes for the registered uses under REACH.

Uses Advised Against : This product must not be used in applications other than those recommended in Section 1, without first seeking the advice of the supplier.Not to be used as a fuel for automotive vehicles.This product is not to be used as a solvent or cleaning agent; for lighting or brightening fires; as a skin cleanser.

1.3 Details of the Supplier of the safety data sheet

Manufacturer/Supplier : Shell Trading Rotterdam B.V.
Weena 70
3012 CM Rotterdam
Netherlands

Telephone : +31 10 441 5000
Email Contact for Safety Data Sheet : TRsds@shell.com

1.4 Emergency Telephone Number

: +44 151 350 4595 National Poison Information Centre (NVIC); Tel. nr. +31 30 - 2748888 (24 hrs a day and 7 days a week).
Only for the purpose of informing medical personnel in cases of accidental intoxications

SECTION 2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Regulation (EC) No 1272/2008 (CLP)
Hazard classes / Hazard categories | Hazard Statement
---|---
Flammable liquids, Category 1 | H224
Aspiration hazard, Category 1 | H304
Skin corrosion/irritation, Category 2 | H315
Toxic to reproduction, Category 2 | H361
Acute toxicity, Category 4: Oral | H302
Acute toxicity, Category 4: Dermal | H312
Acute toxicity, Category 4: Inhalation | H332
Specific target organ toxicity - single exposure, Category 3: Inhalation | H336
Hazardous to the aquatic environment - Long-term Hazard, Category 2 | H411

67/548/EEC or 1999/45/EC

R-phrase(s)
R12; R38; R51/53; R20/21/22; R33; R63; R65; R67

Classification triggering components
Contains gasoline, low boiling point naphtha, unspecified.
Contains tetraethyl lead.

2.2 Label Elements

Signal Words
Danger

CLP Hazard Statements
PHYSICAL HAZARDS:
H224: Extremely flammable liquid and vapour.

HEALTH HAZARDS:
H304: May be fatal if swallowed and enters airways.
H315: Causes skin irritation.
H302: Harmful if swallowed.
H312: Harmful in contact with skin.
H332: Harmful if inhaled.
Safety Data Sheet

H361: Suspected of damaging fertility or the unborn child.
H336: May cause drowsiness or dizziness.

ENVIRONMENTAL HAZARDS:
H411: Toxic to aquatic life with long lasting effects.

CLP Precautionary statements
Prevention: P210: Keep away from heat/sparks/open flames/hot surfaces. - No smoking.
P260: Do not breathe dust/fume/gas/mist/vapours/spray.
P280: Wear protective gloves/protective clothing/eye protection/face protection.

Response: P301+P310: IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician.
P331: Do NOT induce vomiting.

2.3 Other Hazards
Health Hazards: Slightly irritating to respiratory system.
Moderately irritating to eyes.

Safety Hazards: Liquid evaporates quickly and can ignite leading to a flash fire, or an explosion in a confined space. This material is a static accumulator. Even with proper grounding and bonding, this material can still accumulate an electrostatic charge. If sufficient charge is allowed to accumulate, electrostatic discharge and ignition of flammable air-vapour mixtures can occur.

Other Information: This product contains tetraethyl lead which may accumulate in the human body. There are indications from human epidemiological studies that excessive prenatal exposure to tetraethyl lead may cause developmental and neurobehavioural effects in children. This product is intended for use in closed systems only.

This mixture does not contain any REACH registered substances that are assessed to be a PBT or a vPvB.
SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substance

Material Name : Not applicable.

3.2 Mixtures

Mixture Description : Complex mixture of hydrocarbons consisting of paraffins, cycloparaffins, aromatic and olefinic hydrocarbons with carbon numbers predominantly in the C4 to C12 range. Contains lead alkyl anti-knock additives. Maximum lead concentration: 0.56 g/l. Maximum tetraethyl lead content is 0.125% w/w. May also contain several additives at <0.1% v/v each. This product is dyed for grade identification. Includes benzene at less than 0.1 % v/v.

Dyes and markers can be used to indicate tax status and prevent fraud. Refer to chapter 16 for full text of EC R-phrases.

SECTION 4. FIRST-AID MEASURES

4.1 Description of First Aid Measures

Inhalation: Remove to fresh air. If rapid recovery does not occur, transport to nearest medical facility for additional treatment.

Skin Contact: Remove contaminated clothing. Immediately flush skin with large amounts of water for at least 15 minutes, and follow by washing with soap and water if available. If redness, swelling, pain and/or blisters occur, transport to the nearest medical facility for additional treatment. When using high pressure equipment, injection of product under the skin can occur. If high pressure injuries occur, the casualty should be sent immediately to a hospital. Do not wait for symptoms to develop.

Eye Contact: Flush eyes with water while holding eyelids open. Rest eyes for 30 minutes. If redness, burning, blurred vision, or swelling persist transport to the nearest medical facility for additional treatment.

Ingestion: If swallowed, do not induce vomiting: transport to nearest medical facility for additional treatment. If vomiting occurs spontaneously, keep head below hips to prevent aspiration. Protect the airway if vomiting occurs. Give nothing by mouth. If breathing but unconscious, place in the recovery position. If breathing has stopped, apply artificial respiration. Obtain medical treatment immediately. If any of the following delayed signs and symptoms appear within the next 6 hours, transport to the nearest medical facility: fever greater than 101° F (38.3°C), shortness of breath, chest congestion or continued...
Safety Data Sheet

Self-protection of the first aider

4.2 Most important symptoms and effects, both acute and delayed

- Coughing or wheezing.

When administering first aid, ensure that you are wearing the appropriate personal protective equipment according to the incident, injury and surroundings.

Skin irritation signs and symptoms may include a burning sensation, redness, swelling, and/or blisters. Eye irritation signs and symptoms may include a burning sensation and a temporary redness of the eye. If material enters lungs, signs and symptoms may include coughing, choking, wheezing, difficulty in breathing, chest congestion, shortness of breath, and/or fever. The onset of respiratory symptoms may be delayed for several hours after exposure. Breathing of high vapour concentrations may cause central nervous system (CNS) depression resulting in dizziness, light-headedness, headache, nausea and loss of coordination. Continued inhalation may result in unconsciousness and death. Auditory system effects may include temporary hearing loss and/or ringing in the ears.

4.3 Indication of any immediate medical attention and special treatment needed

- Treat symptomatically.

The concentration of lead alkyl compounds present is not significant in the context of treating acute poisoning unless the person had excessive and prolonged exposure to the material.

SECTION 5. FIRE-FIGHTING MEASURES

Clear fire area of all non-emergency personnel.

5.1 Extinguishing Media

- Foam, water spray or fog. Dry chemical powder, carbon dioxide, sand or earth may be used for small fires only.

Unsuitable Extinguishing Media

Do not use direct water jets on the burning product as they could cause a steam explosion and spread of the fire. Simultaneous use of foam and water on the same surface is to be avoided as water destroys the foam.

5.2 Special hazards arising from the substance or mixture

- Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide may be evolved if incomplete combustion occurs. Unidentified organic and inorganic compounds. The vapour is heavier than air, spreads along the ground and distant ignition is possible. Will float and can be reignited on surface water.

5.3 Advice for firefighters

- Proper protective equipment including chemical resistant gloves are to be worn; chemical resistant suit is indicated if large contact with spilled product is expected. Self-Contained
Safety Data Sheet

Breathing Apparatus must be worn when approaching a fire in a confined space. Select fire fighter's clothing approved to relevant Standards (e.g. Europe: EN469).

Additional Advice: Keep adjacent containers cool by spraying with water. If possible remove containers from the danger zone. If the fire cannot be extinguished the only course of action is to evacuate immediately. Contain residual material at affected sites to prevent material from entering drains (sewers), ditches, and waterways.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Avoid contact with skin, eyes and clothing. Evacuate the area of all non-essential personnel. Ventilate contaminated area thoroughly. If contamination of sites occurs remediation may require specialist advice. Take precautionary measures against static discharges. Avoid contact with spilled or released material. Immediately remove all contaminated clothing. For guidance on selection of personal protective equipment see Chapter 8 of this Material Safety Data Sheet. For guidance on disposal of spilled material see Chapter 13 of this Material Safety Data Sheet. Ensure electrical continuity by bonding and grounding (earthing) all equipment. Observe the relevant local and international regulations.

6.1 Personal Precautions, Protective Equipment and Emergency Procedures:

6.1.1 For non emergency personnel: Do not breathe fumes, vapour. Do not operate electrical equipment.

6.1.2 For emergency responders: Shut off leaks, if possible without personal risks. Remove all possible sources of ignition in the surrounding area and evacuate all personnel. Attempt to disperse the gas or to direct its flow to a safe location for example by using fog sprays. Take precautionary measures against static discharge. Ensure electrical continuity by bonding and grounding (earthing) all equipment. Monitor area with combustible gas meter. Vapour can travel for considerable distances both above and below the ground surface. Underground services (drains, pipelines, cable ducts) can provide preferential flow paths.

6.2 Environmental Precautions:

6.3 Methods and Material for Containment and Cleaning Up:

For large liquid spills (> 1 drum), transfer by mechanical means such as vacuum truck to a salvage tank for recovery or safe disposal. Do not flush away residues with water. Retain as contaminated waste. Allow residues to evaporate or soak up
Safety Data Sheet

with an appropriate absorbent material and dispose of safely. Remove contaminated soil and dispose of safely. For small liquid spills (<1 drum), transfer by mechanical means to a labelled, sealable container for product recovery or safe disposal. Allow residues to evaporate or soak up with an appropriate absorbent material and dispose of safely. Remove contaminated soil and dispose of safely. Take precautionary measures against static discharges.

Additional Advice: Notify authorities if any exposure to the general public or the environment occurs or is likely to occur. Local authorities should be advised if significant spillages cannot be contained. Maritime spillages should be dealt with using a Shipboard Oil Pollution Emergency Plan (SOPEP), as required by MARPOL Annex 1 Regulation 26.

6.4 Reference to other sections: For guidance on selection of personal protective equipment see Chapter 8 of this Material Safety Data Sheet. For guidance on disposal of spilled material see Chapter 13 of this Material Safety Data Sheet.

SECTION 7. HANDLING AND STORAGE

General Precautions: Avoid breathing vapours or contact with material. Only use in well ventilated areas. Wash thoroughly after handling. For guidance on selection of personal protective equipment see Chapter 8 of this Material Safety Data Sheet. Use the information in this data sheet as input to a risk assessment of local circumstances to help determine appropriate controls for safe handling, storage and disposal of this material. Air-dry contaminated clothing in a well-ventilated area before laundering. Prevent spillages. Turn off all battery operated portable electronic devices (examples include: cellular phones, pagers and CD players) before operating gasoline pump. Contaminated leather articles including shoes cannot be decontaminated and should be destroyed to prevent reuse. Do not use as a cleaning solvent or other non-motor fuel uses.

Maintenance and Fuelling Activities - Avoid inhalation of vapours and contact with skin.

7.1 Precautions for Safe Handling: When using do not eat or drink. Extinguish any naked flames. Do not smoke. Remove ignition sources. Avoid sparks. Never siphon by mouth. The vapour is heavier than air, spreads along the ground and distant ignition is possible. Avoid exposure. Obtain special instructions before use. Properly dispose of any contaminated rags or cleaning materials in order to prevent fires. Use local exhaust ventilation if there is risk of inhalation.
AVGAS 100LL (<0.1% benzene)
Version 2.1
Effective Date 28.01.2014
Regulation 1907/2006/EC

Safety Data Sheet

Product Transfer

: Wait 2 minutes after tank filling (for tanks such as those on road tanker vehicles) before opening hatches or manholes. Wait 30 minutes after tank filling (for large storage tanks) before opening hatches or manholes. Even with proper grounding and bonding, this material can still accumulate an electrostatic charge. If sufficient charge is allowed to accumulate, electrostatic discharge and ignition of flammable air-vapour mixtures can occur. Be aware of handling operations that may give rise to additional hazards that result from the accumulation of static charges. These include but are not limited to pumping (especially turbulent flow), mixing, filtering, splash filling, cleaning and filling of tanks and containers, sampling, switch loading, gauging, vacuum truck operations, and mechanical movements. These activities may lead to static discharge e.g. spark formation. Restrict line velocity during pumping in order to avoid generation of electrostatic discharge (<= 1 m/s until fill pipe submerged to twice its diameter, then <= 7 m/s). Avoid splash filling. Do NOT use compressed air for filling, discharging, or handling operations.

7.2 Conditions for safe storage, including any incompatibilities

: Drum and small container storage: Keep containers closed when not in use. Drums should be stacked to a maximum of 3 high. Use properly labelled and closeable containers. Take suitable precautions when opening sealed containers, as pressure can build up during storage. Tank storage: Tanks must be specifically designed for use with this product. Bulk storage tanks should be diked (bunded). Locate tanks away from heat and other sources of ignition. Cleaning, inspection and maintenance of storage tanks is a specialist operation, which requires the implementation of strict procedures and precautions. In the interests of air safety, aviation fuels are subject to strict quality requirements and product integrity is of paramount importance. Precautions should be taken to avoid water coming in to contact with aviation fuels. Electrostatic charges will be generated during pumping. Electrostatic discharge may cause fire. Ensure electrical continuity by bonding and grounding (earthing) all equipment to reduce the risk. The vapours in the head space of the storage vessel may lie in the flammable/explosive range and hence may be flammable. Refer to section 15 for any additional specific legislation covering the packaging and storage of this product.

Recommended Materials

: For containers, or container linings use mild steel, stainless steel. Aluminium may also be used for applications where it
does not present an unnecessary fire hazard. Examples of suitable materials are: high density polyethylene (HDPE), polypropylene (PP), and Viton (FKM), which have been specifically tested for compatibility with this product. For container linings, use amine-adduct cured epoxy paint. For seals and gaskets use: graphite, PTFE, Viton A, Viton B.

Unsuitable Materials : Some synthetic materials may be unsuitable for containers or container linings depending on the material specification and intended use. Examples of materials to avoid are: natural rubber (NR), nitrile rubber (NBR), ethylene propylene rubber (EPDM), polymethyl methacrylate (PMMA), polystyrene, polyvinyl chloride (PVC), polyisobutylene. However, some may be suitable for glove materials.

Container Advice : Containers, even those that have been emptied, can contain explosive vapours. Do not cut, drill, grind, weld or perform similar operations on or near containers. Gasoline containers must not be used for storage of other products.

7.3 Specific end use(s) : Please refer to Ch16 and/or the annexes for the registered uses under REACH. See additional references that provide safe handling practices for liquids that are determined to be static accumulators: American Petroleum Institute 2003 (Protection Against Ignitions Arising out of Static, Lightning and Stray Currents) or National Fire Protection Agency 77 (Recommended Practices on Static Electricity). CENELÈC CLC/TR 50404 (Electrostatics – Code of practice for the avoidance of hazards due to static electricity).

Additional Information : Ensure that all local regulations regarding handling and storage facilities are followed. The following activities have been associated with high levels of exposure to gasoline vapours: Top-loading of tankers, open ship loading by deck crew, drum filling/emptying, overwing fueling of aircraft and laboratory testing (particularly sample bottle washing). In the interests of air safety, aviation fuels are subject to strict quality requirements and product integrity is of paramount importance. For one source of information on international standards for the quality assurance of aviation fuels, see www.jointinspectiongroup.org.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

If the American Conference of Governmental Industrial Hygienists (ACGIH) value is provided on this document, it is provided for information only.

### Additional Information

In the absence of a national exposure limit, the American Conference of Governmental Industrial Hygienists (ACGIH) recommends the following values for Gasoline low boiling point naphtha: TWA - 300 ppm STEL - 500 ppm Critical effects based on Irritation and Central Nervous System.

Skin notation means that significant exposure can also occur by absorption of liquid through the skin and of vapour through the eyes or mucous membranes. SHELL IS is the Shell Internal Standard.

**PNEC related information**: Substance is a hydrocarbon with a complex, unknown or variable composition. Conventional methods of deriving PNECs are not appropriate and it is not possible to identify a single representative PNEC for such substances.

**Monitoring Methods**: Monitoring of the concentration of substances in the breathing zone of workers or in the general workplace may be required to confirm compliance with an OEL and adequacy of exposure controls. For some substances biological monitoring may also be appropriate. Validated exposure measurement methods should be applied by a competent person and samples analysed by an accredited laboratory. Examples of sources of recommended exposure measurement methods are given below or contact the supplier. Further national methods may be available.

Occupational Safety and Health Administration (OSHA), USA: Sampling and Analytical Methods http://www.osha.gov/

**8.2 Exposure Controls**

**General Information**: The level of protection and types of controls necessary will vary depending upon potential exposure conditions. Select controls based on a risk assessment of local circumstances. Appropriate measures include: Use sealed systems as far as possible. Adequate explosion-proof ventilation to control airborne concentrations below the exposure guidelines/limits. Local exhaust ventilation is recommended. Eye washes and showers for emergency use. Always observe good personal hygiene measures, such as washing hands after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Practice good housekeeping. Define procedures for safe handling and maintenance of controls. Educate and train workers in the hazards and control measures relevant to normal activities associated with this product. Ensure appropriate selection, testing and
maintenance of equipment used to control exposure, e.g. personal protective equipment, local exhaust ventilation. Firewater monitors and deluge systems are recommended.

Do not ingest. If swallowed then seek immediate medical assistance.

Drain down system prior to equipment break-in or maintenance. Retain drain downs in sealed storage pending disposal or for subsequent recycle.

**Occupational Exposure Controls**

**Personal Protective Equipment**: Personal protective equipment (PPE) should meet recommended national standards. Check with PPE suppliers. The provided information is made in consideration of the PPE directive (Council Directive 89/686/EEC) and the CEN European Committee for Standardisation (CEN) standards.

**Eye Protection**: Chemical splash goggles (chemical monogoggles). If a local risk assessment deems it so, then chemical splash goggles may not be required and safety glasses may provide adequate eye protection. Approved to EU Standard EN166.

**Hand Protection**: Suitability and durability of a glove is dependent on usage, e.g. frequency and duration of contact, chemical resistance of glove material, dexterity. Always seek advice from glove suppliers. Contaminated gloves should be replaced. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturizer is recommended. For continuous contact we recommend gloves with breakthrough time of more than 240 minutes with preference for > 480 minutes where suitable gloves can be identified. For short-term/splash protection we recommend the same, but recognise that suitable gloves offering this level of protection may not be available and in this case a lower breakthrough time may be acceptable so long as appropriate maintenance and replacement regimes are followed. Glove thickness is not a good predictor of glove resistance to a chemical as it is dependent on the exact composition of the glove material. Select gloves tested to a relevant standard (e.g. Europe EN374, US F739). When prolonged or frequent repeated contact occurs, Nitrile gloves may be suitable. (Breakthrough
Body protection : Chemical resistant gloves/gauntlets, boots, and apron (where risk of splashing).

Respiratory Protection : If engineering controls do not maintain airborne concentrations to a level which is adequate to protect worker health, select respiratory protection equipment suitable for the specific conditions of use and meeting relevant legislation. Check with respiratory protective equipment suppliers. Where air-filtering respirators are suitable, select an appropriate combination of mask and filter. Where air-filtering respirators are unsuitable (e.g. airborne concentrations are high, risk of oxygen deficiency, confined space) use appropriate positive pressure breathing apparatus. All respiratory protection equipment and use must be in accordance with local regulations. Select a filter suitable for combined particulate/organic gases and vapors [Type A/Type P boiling point > 65°C (149°F)] meeting EN14387 and EN143.

Thermal Hazards : Not applicable.

Environmental exposure control measures : Local guidelines on emission limits for volatile substances must be observed for the discharge of exhaust air containing vapour. Information on accidental release measures are to be found in section 6.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

Safety Data Sheet

Solubility in other solvents : Data not available
n-octanol/water partition coefficient (log Pow) : 2 - 7
Kinematic viscosity : 0,5 - 0,75 mm²/s at 40 °C / 104 °F
Vapour density (air=1) : > 3
Flammability : Data not available
Oxidizing Properties : Not applicable.
Explosive Properties : Not classified

9.2 Other Information
Electrical conductivity : Low conductivity: < 100 pS/m, The conductivity of this material makes it a static accumulator., A liquid is typically considered nonconductive if its conductivity is below 100 pS/m and is considered semi-conductive if its conductivity is below 10,000 pS/m., Whether a liquid is nonconductive or semi-conductive, the precautions are the same., A number of factors, for example liquid temperature, presence of contaminants, and anti-static additives can greatly influence the conductivity of a liquid.

Other Information : Not applicable.

SECTION 10. STABILITY AND REACTIVITY

10.1 Reactivity : May oxidise in the presence of air.
10.2 Chemical stability : Stable under normal conditions of use.
10.3 Possibility of Hazardous Reactions : No hazardous reaction is expected when handled and stored according to provisions.
10.4 Conditions to Avoid : Avoid heat, sparks, open flames and other ignition sources.
10.5 Incompatible Materials : Strong oxidising agents.
10.6 Hazardous Decomposition Products : Hazardous decomposition products are not expected to form during normal storage. Thermal decomposition is highly dependent on conditions. A complex mixture of airborne solids, liquids and gases, including carbon monoxide, carbon dioxide and other organic compounds will be evolved when this material undergoes combustion or thermal or oxidative degradation.
Safety Data Sheet

Sensitivity to Static Discharge: Yes, in certain circumstances product can ignite due to static electricity.

SECTION 11. TOXICOLOGICAL INFORMATION

11.1 Information on Toxicological effects

Basis for Assessment: Information given is based on product data, a knowledge of the components and the toxicology of similar products. Unless indicated otherwise, the data presented is representative of the product as a whole, rather than for individual component(s).

Acute Oral Toxicity: Low toxicity: LD50 >2000 mg/kg, Rat
Aspiration into the lungs when swallowed or vomited may cause chemical pneumonitis which can be fatal.

Acute Dermal Toxicity: Low toxicity: LD50 >2000 mg/kg, Rabbit

Acute Inhalation Toxicity: Low toxicity: LC50 >5 mg/l / 4 h, Rat
High concentrations may cause central nervous system depression resulting in headaches, dizziness and nausea; continued inhalation may result in unconsciousness and/or death.

Skin corrosion/irritation: Irritating to skin.
Serious eye damage/irritation: Expected to be slightly irritating.

Respiratory Irritation: Based on human experience, breathing of vapours or mists may cause a temporary burning sensation to nose, throat and lungs.

Respiratory or skin sensitisation: Not expected to be a skin sensitiser.

Germ cell mutagenicity: Not considered a mutagenic hazard.
Carcinogenicity: Not classified as a carcinogen.

## Safety Data Sheet

|-------------------------|------------------------------------------|----------------------------------------------|---------------------------------------------|--------------------------------------|----------------------------------------|--------------------------------------------------|--------------------------------------------------|----------------------------------------------|--------------------------------------------------|--------------------------------------------------|----------------------------------------------|--------------------------------------------------|--------------------------------------------------|--------------------------------------------------|----------------------------------------------|--------------------------------------------------|--------------------------------------------------|--------------------------------------------------|----------------------------------------------|--------------------------------------------------|--------------------------------------------------|

### Reproductive and Developmental Toxicity

- Causes foetotoxicity at doses which are maternally toxic. (Toluene)
- May impair fertility at doses which produce other toxic effects. (n-hexane)
- This product contains tetraethyl lead which may cause harm to the unborn child. Exposure to tetraethyl lead is associated with developmental effects which include reduced birth weight, reduced gestational age and neurobehavioral effects. Many case studies involving abuse during pregnancy indicate that toluene can cause birth defects, growth retardation and learning difficulties. (Toluene)

### Summary on evaluation of the CMR properties

- **Carcinogenicity**: This product does not meet the criteria for classification in categories 1A/1B.
- **Mutagenicity**: This product does not meet the criteria for classification in categories 1A/1B.
- **Reproductive Toxicity (fertility)**: This product does not meet the criteria for classification in categories 1A/1B.

**Specific target organ toxicity - single exposure**: High concentrations may cause central nervous system depression resulting in headaches, dizziness and nausea;
Safety Data Sheet

continued inhalation may result in unconsciousness and/or death.

Specific target organ toxicity - repeated exposure
Kidney: caused kidney effects in male rats which are not considered relevant to humans

Additional Information
Exposure to very high concentrations of similar materials has been associated with irregular heart rhythms and cardiac arrest. Prolonged and repeated exposures to high concentrations have resulted in hearing loss in rats. Solvent abuse and noise interaction in the work environment may cause hearing loss. (Toluene) Abuse of vapours has been associated with organ damage and death. (Toluene) Classifications by other authorities under varying regulatory frameworks may exist.

SECTION 12. ECOLOGICAL INFORMATION

Basis for Assessment: Fuels are typically made from blending several refinery streams. Ecotoxicological studies have been carried out on a variety of hydrocarbon blends and streams but not those containing additives. Information given is based on a knowledge of the components and the ecotoxicology of similar products. Unless indicated otherwise, the data presented is representative of the product as a whole, rather than for individual component(s).

12.1 Toxicity
Acute Toxicity: Expected to be toxic: LL/EL/IL50 > 1 <= 10 mg/l (to aquatic organisms) LL/EL50 expressed as the nominal amount of product required to prepare aqueous test extract.
Fish: Expected to be toxic: LL/EL/IL50 > 1 <= 10 mg/l
Aquatic crustacea: Expected to be toxic: LL/EL/IL50 > 1 <= 10 mg/l
Algae/aquatic plants: Expected to be toxic: LL/EL/IL50 > 1 <= 10 mg/l
Microorganisms: Expected to be harmful: LL/EL/IL50 >10 <= 100 mg/l

Chronic Toxicity
Fish: NOEC/NOEL expected to be > 1.0 - <= 10 mg/l
Aquatic crustacea: NOEC/NOEL expected to be > 1.0 - <= 10 mg/l

12.2 Persistence and degradability: Major constituents are expected to be inherently biodegradable, but the product contains components that may persist in the environment. The volatile constituents will oxidize rapidly by photochemical reactions in air.

12.3 Bioaccumulative: Contains constituents with the potential to bioaccumulate.
Safety Data Sheet

Potential

12.4 Mobility in Soil: Evaporates within a day from water or soil surfaces. Large volumes may penetrate soil and could contaminate groundwater. Toxic to aquatic organisms; may cause long-term adverse effects in the aquatic environment. Ether oxygenates are significantly more water soluble and less biodegradable than benzene, toluene, ethyl benzene and xylenes (BTEX). Consequently ether oxygenates have the potential to migrate relatively longer distances than BTEX in groundwater. Contains volatile components. Floats on water.

12.5 Result of PBT and vPvB assessment: This mixture does not contain any REACH registered substances that are assessed to be a PBT or a vPvB.

12.6 Other Adverse Effects: Films formed on water may affect oxygen transfer and damage organisms.

SECTION 13. DISPOSAL CONSIDERATIONS

13.1 Waste Treatment Methods

Material Disposal: Recover or recycle if possible. It is the responsibility of the waste generator to determine the toxicity and physical properties of the material generated to determine the proper waste classification and disposal methods in compliance with applicable regulations. Waste arising from a spillage or tank cleaning should be disposed of in accordance with prevailing regulations, preferably to a recognised collector or contractor. The competence of the collector or contractor should be established beforehand. Do not dispose into the environment, in drains or in water courses. Do not dispose of tank water bottoms by allowing them to drain into the ground. This will result in soil and groundwater contamination.

Container Disposal: Drain container thoroughly. After draining, vent in a safe place away from sparks and fire. Residues may cause an explosion hazard. Do not puncture, cut, or weld uncleaned drums. Send to drum recoverer or metal reclaimer.

Local Legislation: EU Waste Disposal Code (EWC): 13 07 02 petrol. The number given to waste is associated with the appropriate usage. The user must decide if their particular use results in another waste code being assigned.
Disposal should be in accordance with applicable regional, national, and local laws and regulations. Local regulations may be more stringent than regional or national requirements and must be in compliance.

14.6 Special precautions for user : Special Precautions: Refer to Chapter 7, Handling & Storage, for special precautions which a user needs to be aware of or needs to comply with in connection with transport.

14.7 Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code
Pollution Category : Not applicable.
Ship Type : Not applicable.
Product Name : Not applicable.
Special Precaution : Not applicable.
Safety Data Sheet

Additional Information : MARPOL Annex 1 rules apply for bulk shipments by sea.

SECTION 15.  REGULATORY INFORMATION

The regulatory information is not intended to be comprehensive. Other regulations may apply to this material.

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

Other regulatory Information

Recommended Restrictions on Use (Advice Against) : This product must not be used in applications other than those recommended in Section 1, without first seeking the advice of the supplier. Not to be used as a fuel for automotive vehicles. This product is not to be used as a solvent or cleaning agent; for lighting or brightening fires; as a skin cleanser.

15.2 Chemical Safety Assessment : A Chemical Safety Assessment was performed for all substances of this product.

SECTION 16.  OTHER INFORMATION

R-phrase(s)
R12 Extremely flammable.
R26/27/28 Very toxic by inhalation, in contact with skin and if swallowed.
R33 Danger of cumulative effects.
R38 Irritating to skin.
R50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
R51/53 Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
R61 May cause harm to the unborn child.
R62 Possible risk of impaired fertility.
R63 Possible risk of harm to the unborn child.
R65 Harmful: may cause lung damage if swallowed.
R67 Vapours may cause drowsiness and dizziness.
Safety Data Sheet

CLP Hazard Statements
H224  Extremely flammable liquid and vapour.
H300  Fatal if swallowed.
H302  Harmful if swallowed.
H304  May be fatal if swallowed and enters airways.
H310  Fatal in contact with skin.

H312  Harmful in contact with skin.
H315  Causes skin irritation.
H330  Fatal if inhaled.
H332  Harmful if inhaled.
H336  May cause drowsiness or dizziness.
H360  May damage fertility or the unborn child.
H361  Suspected of damaging fertility or the unborn child.
H373  May cause damage to organs or organ systems through prolonged or repeated exposure.
H400  Very toxic to aquatic life.
H410  Very toxic to aquatic life with long lasting effects.
H411  Toxic to aquatic life with long lasting effects.

Safety Data Sheet

**Additional Information**: This document contains important information to ensure the safe storage, handling and use of this product. The information in this document should be brought to the attention of the person in your organisation responsible for advising on safety matters.

**Other Information**

**Further Information**: This product contains tetraethyl lead which may accumulate in the human body. There are indications from human epidemiological studies that excessive prenatal exposure to tetraethyl lead may cause developmental and neurobehavioural effects in children. This product is intended for use in closed systems only.

This mixture does not contain any REACH registered substances that are assessed to be a PBT or a vPvB.

**Abbreviations and Acronyms**: The standard abbreviations and acronyms used in this document can be looked up in reference literature (e.g. scientific dictionaries) and/or websites.

Flam. Liq. = Flammable liquids

Exposure Scenario - Worker

LBP Naphtha (< 0.1% Benzene)

SECTION 1 EXPOSURE SCENARIO TITLE

Title
Manufacture of substance - Industrial

Use Descriptor
Sector of Use: SU 3, SU8, SU9
Process Categories: PROC 1, PROC 2, PROC 3, PROC 4, PROC 8a, PROC 8b, PROC 15
Environmental Release Categories: ERC 1, ERC 4, ESVOC SpERC 1.1.v1

Scope of process
Manufacture of the substance or use as a process chemical or extraction agent. Includes recycling/recovery, material transfers, storage, maintenance and loading (including marine vessel/barge, road/rail car and bulk container), sampling and associated laboratory activities.

SECTION 2 OPERATIONAL CONDITIONS AND RISK MANAGEMENT MEASURES

Section 2.1 Control of Worker Exposure

Product Characteristics
Physical form of product Liquid, vapour pressure > 10 kPa at STP
Concentration of substance in product. Covers use of substance/product up to 100% (unless stated differently).

Frequency and Duration of Use
Covers daily exposures up to 8 hours (unless stated differently).

Other Operational Conditions affecting Exposure
Operation is carried out at elevated temperature (> 20°C above ambient temperature). Assumes a good basic standard of occupational hygiene has been implemented.

Contributing Scenarios Risk Management Measures
General measures (skin irritants).
Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent / minimise exposures and to report any skin problems that may develop.

</tbody>
</table>

#### Frequency and Duration of Use

- Continuous release.
- Emission Days (days/year): 300

#### Environmental factors not influenced by risk management

- Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

#### Other Operational Conditions affecting Environmental Exposure

- Release fraction to air from process (initial release prior to RMM): 0,05
- Release fraction to wastewater from process (initial release prior to RMM): 3,0E-03
- Release fraction to soil from process (initial release prior to RMM): 1,0E-04
Technical conditions and measures at process level (source) to prevent release

- Common practices vary across sites thus conservative process release estimates used.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil

- Prevent discharge of undissolved substance to or recover from onsite wastewater.
- Risk from environmental exposure is driven by humans via indirect exposure (primarily inhalation).
- Onsite waste water treatment required.
- Treat air emission to provide a typical removal efficiency of (%) 99,0
- Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of >= (%) 99,1
- If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) 80,4

Organisational measures to prevent/limit release from site

- Do not apply industrial sludge to natural soils.
- Sludge should be incinerated, contained or reclaimed.

Conditions and Measures related to municipal sewage treatment plant

- Estimated substance removal from wastewater via domestic sewage treatment (%): \(95,5\)
- Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): \(99,1\)
- Maximum allowable site tonnage (MSafe) (kg/d): \(2,0E+06\)
- Assumed domestic sewage treatment plant flow (m3/d): \(10,000\)

Conditions and Measures related to external treatment of waste for disposal

- During manufacturing no waste of the substance is generated.

Conditions and measures related to external recovery of waste

- During manufacturing no waste of the substance is generated.

SECTION 3 | EXPOSURE ESTIMATION

Section 3.1 - Health

- The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated.

Section 3.2 - Environment

- The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
### SECTION 4 GUIDANCE TO CHECK COMPLIANCE WITH THE EXPOSURE SCENARIO

#### Section 4.1 - Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented.

Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels.

Available hazard data do not enable the derivation of a DNEL for dermal irritant effects.

Risk Management Measures are based on qualitative risk characterisation.

#### Section 4.2 - Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures.

- Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination.

- Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.

Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org).

## Technical conditions and measures at process level (source) to prevent release

Common practices vary across sites thus conservative process release estimates used.

## Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil

- Prevent discharge of undissolved substance to or recover from onsite wastewater.
- Risk from environmental exposure is driven by freshwater sediment.
- If discharging to domestic sewage treatment plant, no secondary wastewater treatment required.
- Treat air emission to provide a typical removal efficiency of (%) 80
- Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of >= (%) 92,9
- If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) 0

## Organisational measures to prevent/limit release from site

- Do not apply industrial sludge to natural soils.
- Sludge should be incinerated, contained or reclaimed.

### Conditions and Measures related to municipal sewage treatment plant

- Estimated substance removal from wastewater via domestic sewage treatment (%): 95,5
- Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): 95,5
- Maximum allowable site tonnage (MSafe) (kg/d): 7,8E+04
- Assumed domestic sewage treatment plant flow (m3/d): 2,000

### Conditions and Measures related to external treatment of waste for disposal

- This substance is consumed during use and no waste of substance is generated.

### Conditions and measures related to external recovery of waste

- This substance is consumed during use and no waste of substance is generated.

## SECTION 3 | EXPOSURE ESTIMATION

### Section 3.1 - Health

The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated.

### Section 3.2 - Environment

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
### SECTION 4 GUIDANCE TO CHECK COMPLIANCE WITH THE EXPOSURE SCENARIO

#### Section 4.1 - Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not enable the derivation of a DNEL for dermal irritant effects. Risk Management Measures are based on qualitative risk characterisation.

#### Section 4.2 - Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures.

- Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination.
- Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.

Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org).
### Exposure Scenario - Worker

**LBP Naphtha (< 0.1%Benzene)**

**SECTION 1**  
**EXPOSURE SCENARIO TITLE**  
Title: Distribution of substance - Industrial  

**Use Descriptor**  
Sector of Use: SU 3  
Process Categories: PROC 1, PROC 2, PROC 3, PROC 4, PROC 8a, PROC 8b, PROC 9, PROC 15  
Environmental Release Categories: ERC 1, ERC 2, ERC 3, ERC 4, ERC 5, ERC 6A, ERC 6B, ERC 6C, ERC 6D, ERC 7, ESVOC SpERC 1.1b.v1  

**Scope of process**  
Loading (including marine vessel/barge, rail/road car and IBC loading) and repacking (including drums and small packs) of substance, including its sampling, storage, unloading distribution and associated laboratory activities.

**SECTION 2**  
**OPERATIONAL CONDITIONS AND RISK MANAGEMENT MEASURES**  

**Section 2.1**  
**Control of Worker Exposure**  

**Product Characteristics**  
Physical form of product: Liquid, vapour pressure > 10 kPa at STP  
Concentration of substance in product: Covers use of substance/product up to 100% (unless stated differently).

**Frequency and Duration of Use**  
Covers daily exposures up to 8 hours (unless stated differently).

**Other Operational Conditions affecting Exposure**  
Assumes use at not more than 20°C above ambient temperature (unless stated differently). Assumes a good basic standard of occupational hygiene has been implemented.

**Contributing Scenarios**  
General measures (skin irritants).  
Avoid direct skin contact with product. Identify potential areas for indirect skin contact. Wear gloves (tested to EN374) if hand contact with substance likely. Clean up contamination/spills as soon as they occur. Wash off any skin contamination immediately. Provide basic employee training to prevent / minimise exposures and to report any skin problems that may develop.
### General Exposures (Closed Systems)
- No other specific measures identified.

### General Exposures (Closed Systems) with Sample Collection
- No other specific measures identified.

### General Exposures (Open Systems)
- Provide extract ventilation to points where emissions occur.

### Process Sampling
- No other specific measures identified.

### Laboratory Activities
- Handle in a fume cupboard or under extract ventilation.

### Bulk Closed Loading and Unloading
- No other specific measures identified.

### Drum and Small Package Filling
- Fill containers/cans at dedicated fill points supplied with local extract ventilation.

### Equipment Cleaning and Maintenance
- No other specific measures identified.

### Storage
- No other specific measures identified.

### Section 2.2 Control of Environmental Exposure

<table>
<thead>
<tr>
<th>Substance is complex UVCB.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Predominantly hydrophobic.</td>
</tr>
</tbody>
</table>

#### Amounts Used
- Fraction of EU tonnage used in region: 0.1
- Regional use tonnage (tonnes/year): 1.87E+07
- Fraction of Regional tonnage used locally: 0.002
- Annual site tonnage (tonnes/year): 3.75E+04
- Maximum daily site tonnage (kg/day): 1.2E+05

#### Frequency and Duration of Use
- Continuous release.
- Emission Days (days/year): 100

#### Environmental Factors Not Influenced by Risk Management
- Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

#### Other Operational Conditions Affecting Environmental Exposure
- Release fraction to air from process (initial release prior to RMM): 1.0E-03
- Release fraction to wastewater from process (initial release prior to RMM): 1.0E-05
- Release fraction to soil from process (initial release prior to RMM): 1.0E-05

#### Technical Conditions and Measures at Process Level (Source) to Prevent Release
Common practices vary across sites thus conservative process release estimates used.

**Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil**

- Risk from environmental exposure is driven by humans via indirect exposure (primarily inhalation).
- If discharging to domestic sewage treatment plant, no secondary wastewater treatment required.
- Treat air emission to provide a typical removal efficiency of (%) 90
- Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of >= (%) 12
- If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) 0

**Organisational measures to prevent/limit release from site**

Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

**Conditions and Measures related to municipal sewage treatment plant**

- Estimated substance removal from wastewater via domestic sewage treatment (%) 95,5
- Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%) 95,5
- Maximum allowable site tonnage (MSafe) (kg/d): 1,1E+06
- Assumed domestic sewage treatment plant flow (m3/d) 2,000

**Conditions and Measures related to external treatment of waste for disposal**

External treatment and disposal of waste should comply with applicable local and/or regional regulations.

**Conditions and measures related to external recovery of waste**

External recovery and recycling of waste should comply with applicable local and/or regional regulations.

**SECTION 3 EXPOSURE ESTIMATION**

**Section 3.1 - Health**

The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated.

**Section 3.2 - Environment**

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
### SECTION 4 GUIDANCE TO CHECK COMPLIANCE WITH THE EXPOSURE SCENARIO

#### Section 4.1 - Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not enable the derivation of a DNEL for dermal irritant effects. Risk Management Measures are based on qualitative risk characterisation.

#### Section 4.2 - Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures.

- Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination.
- Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.

Further details on scaling and control technologies are provided in SpERC factsheet [http://cefic.org](http://cefic.org).

**EXPOSURE ESTIMATION**

**Section 3.1 - Health**

The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated.

**Section 3.2 - Environment**

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
## EXPOSURE SCENARIO

### Section 4.1 - Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not enable the derivation of a DNEL for dermal irritant effects. Risk Management Measures are based on qualitative risk characterisation.

### Section 4.2 - Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures.

- Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination.
- Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination.

Further details on scaling and control technologies are provided in SpERC factsheet ([http://cefic.org](http://cefic.org)).
### Exposure Scenario - Consumer

**Use Descriptor:**
- **Sector of Use:** SU 21
- **Product Categories:** PC13
- **Environmental Release Categories:** ERC 9A, ERC 9B, ESVOC SpERC 9.12c.v1

**Scope of process:** Covers consumer uses in liquid fuels.

### SECTION 2

#### OPERATIONAL CONDITIONS AND RISK MANAGEMENT MEASURES

**Section 2.1 Control of Consumer Exposure**

**Product Characteristics**
- Physical form of product: Liquid, vapour pressure > 10 Pa at STP
- Concentration of substance in product: Unless otherwise stated:
  - Covers concentrations up to 100%

**Amounts Used**
- Unless otherwise stated:
  - for each use event, covers amount up to (g): 37.500
  - covers skin contact area (cm²): 420

**Frequency and Duration of Use**
- Unless otherwise stated:
  - covers use up to (times/day of use): 0.143
  - Covers use up to (hours/event): 2

**Other Operational Conditions affecting Exposure**
- Unless otherwise stated:
  - Covers use at ambient temperatures.
  - Covers use in room size of 20m³.
  - Covers use under typical household ventilation.

<td><strong>Fuels. Liquid, Garden Equipment - Use.</strong></td>
</tr>
<tr>
<td>Covers concentrations up to 100%</td>
</tr>
<tr>
<td>covers use up to 26 day/year</td>
</tr>
<tr>
<td>Covers use up to 1 times/day of use</td>
</tr>
<tr>
<td>For each use event, covers amount up to 750 g.</td>
</tr>
<tr>
<td>Covers outdoor use.</td>
</tr>
<tr>
<td>Covers use in room size of 100 m³</td>
</tr>
<tr>
<td>Covers exposure up to 2.00 hours/event</td>
</tr>
<tr>
<td><strong>Fuels. Liquid: Garden Equipment - Refuelling.</strong></td>
</tr>
<tr>
<td>Covers concentrations up to 100%</td>
</tr>
<tr>
<td>covers use up to 26 day/year</td>
</tr>
<tr>
<td>Covers use up to 1 times/day of use</td>
</tr>
<tr>
<td>covers skin contact area up to 420 cm²</td>
</tr>
<tr>
<td>For each use event, covers amount up to 750 g.</td>
</tr>
<tr>
<td>Covers use in a one car garage (34 m³) under typical ventilation.</td>
</tr>
<tr>
<td>Covers use in room size of 34 m³</td>
</tr>
<tr>
<td>Covers exposure up to 0.03 hours/event</td>
</tr>

### Section 2.2 Control of Environmental Exposure

| Substance is complex UVCB.                        |
| Predominantly hydrophobic.                        |
Safety Data Sheet

### Amounts Used

| Fraction of EU tonnage used in region: | 0,1 |
| Regional use tonnage (tonnes/year): | 1,39E+07 |
| Fraction of Regional tonnage used locally: | 5,0E-04 |
| Annual site tonnage (tonnes/year): | 7,0E+03 |
| Maximum daily site tonnage (kg/day): | 1,9E+04 |

### Frequency and Duration of Use

Continuous release.

Emission Days (days/year): 365

### Environmental factors not influenced by risk management

- Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

### Other Operational Conditions affecting Environmental Exposure

- Release fraction to air from process (initial release prior to RMM): 0,01
- Release fraction to wastewater from process (initial release prior to RMM): 1,0E-05
- Release fraction to soil from process (initial release prior to RMM): 1,0E-05

### Conditions and Measures related to municipal sewage treatment plant

Risk from environmental exposure is driven by humans via indirect exposure (primarily inhalation).

- Estimated substance removal from wastewater via domestic sewage treatment (%): 95,5
- Maximum allowable site tonnage (MSafe) based on release following total wastewater treatment removal (kg/d): 1,8E+05
- Assumed domestic sewage treatment plant flow (m3/d): 2,000

### Conditions and Measures related to external treatment of waste for disposal

Combustion emissions limited by required exhaust emission controls. Waste combustion emissions considered in regional exposure assessment.

### Conditions and measures related to external recovery of waste

This substance is consumed during use and no waste of substance is generated.

### SECTION 3 EXPOSURE ESTIMATION

#### Section 3.1 - Health

The ECETOC TRA tool has been used to estimate consumer exposures unless otherwise indicated.

#### Section 3.2 - Environment

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
## SECTION 4 GUIDANCE TO CHECK COMPLIANCE WITH THE EXPOSURE SCENARIO

### Section 4.1 - Health
Predicted exposures are not expected to exceed the applicable consumer reference values when the operational conditions/risk management measures given in section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels.

### Section 4.2 - Environment
Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org).
